U.S. Permanent Resident | Authorized to work without sponsorship

Senior Client & Game Engineer | Unity | Live-Service Systems | Tools | Performance

Senior client and game engineer with 7 years of experience shipping and supporting live-service games in Unity, including Blue Archive. Experienced in gameplay and UI systems, performance optimization, content pipelines, and tools for designers, artists, and writers.

SKILLS

Languages: C#, C++, Java
Source Control: Git, Perforce, SVN
Engines: Unity, Unreal Engine
Build & CI: Jenkins, TeamCity

EXPERIENCE

Nexon Games - Lead Programmer

May 2024 - April 2026

Blue Archive | Anime-Style Gacha Squad RPG | Unity | Android, iOS, Steam

- Cut stage-loading overhead by converting JSON data to MemoryPack binary format, reducing parsing memory usage by over 80% and parse time by 70%
- Built custom tools for scenario writers and content teams, including a GUI settings editor for JSON-based settings and Roslyn-based DAO validation checks
- Built a Battle Pass system
- Implemented seasonal content, including a railroad placement mini-game
- Mentored junior programmers, conducted code reviews, delegated tasks, and led regular check-ins

5minlab - Game Programmer

May 2023 - May 2024

Unreleased Open World Action RPG | Unreal Engine 5

- Implemented core combat abilities with Unreal Gameplay Ability System (GAS)
- Enabled designers to create buffs in Blueprint without programmer support

Unreleased Action RPG | Unity

- Led rapid prototyping as the sole programmer
- Converted a top-down action game to full 3D and implemented core systems, including combat mechanics and UI components such as inventory

Dinkum Mobile | Unity | Mobile

- Provided technical support for the art team on character customization and animation workflows
- Designed and implemented the combat system
- Used Mirror library for multiplayer functionality

DoubleU Games - Unity Programmer

June 2022 - May 2023

Undead World | Idle RPG | Unity | Android, iOS

- Developed out-game UI/UX content
- Managed build system infrastructure (Jenkins)

5minlab - Game Programmer May 2021 - June 2022

Smash Legends | PvP Battle Action Game | Unity | Steam, Android, iOS

- Refactored legacy code and reduced technical debt to facilitate easier feature additions
- Created, improved, and maintained tools to enhance content development productivity (maps, game modes, characters, VFX)
- In-game content (new character) development

Andromeda Games - Unity Programmer May 2018 - February 2019

60 Second Hero | Idle RPG | Unity | Android, iOS

- Worked on project from prototype to release, and major live-service updates for guild systems and raids
- Created Unity editor tools to streamline testing and development workflows
- Developed an integrated Excel+VBA solution that enabled efficient balancing by allowing team members to set up party combinations and calculate DPS based on character, equipment, skill, and set buff data tables without connecting to the game
- UI/UX content development - Used NGUI

Andromeda Games - Unity Programmer February 2015 - May 2016

God of Billiards | Billiards Game | Unity | Android, iOS

- Worked on project from prototype to release, and major live-service updates for character systems and guilds
- UI/UX content development - Used NGUI
